• DESIGN SYSTEM V2.0

STAY HIDDEN. HUNT SMART.

The visual language of The Prey, a GPS-based, real-world hide-and-seek game. Tokens, components and game UI patterns for building a tactical readout someone can read at a sprint.

Surface #181B17 | Signal #64FF00 | Threat #FF2F1F

Display Special Elite | Body PT Mono

WHAT CHANGED IN V2.0

Same palette and fonts. Every hex value and both typefaces carry over unchanged.

Tokens first. Named primitive and semantic tokens, a 4pt scale, a radius scale (4–20px) and three elevation levels replace one-off values.

Calmer and more legible. No scanline overlay, glow kept for live and pressed states, 48px touch targets, labels moved from Ghost to Soft so they pass contrast.

01 · BRAND

Logo

The new mark is a fox in the crosshairs. The broken reticle is the hunter's view and the faceted fox mask is the prey. A green lock dot sits between its eyes. Everything is built from flat geometry, so the mark stays sharp at 16px and holds up as a single colour.

App icon: `logo/the-prey-app-icon.svg`

Mark, transparent: `logo/the-prey-mark.svg`

One colour: `logo/the-prey-mark-mono.svg`

Lockup

THE PREY

STAY HIDDEN · HUNT SMART

Construction & clear space

RULES

· 512 grid. Reticle radius 168, stroke 18, round caps, gaps of 28° at each cardinal.

· The fox mask is symmetric about the vertical axis. Its right half takes a 20% Void overlay to give it a facet.

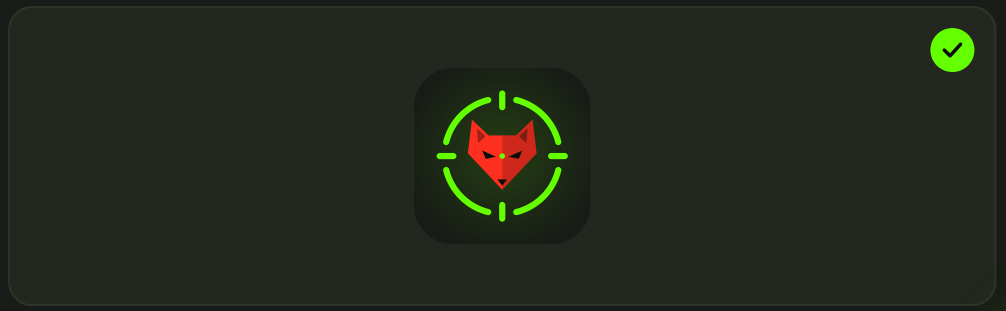

· Clear space on all sides equals the length of one reticle tick (1/8 of the mark width).

· Minimum size: 24px for the mark, 16px for the app icon (favicon).

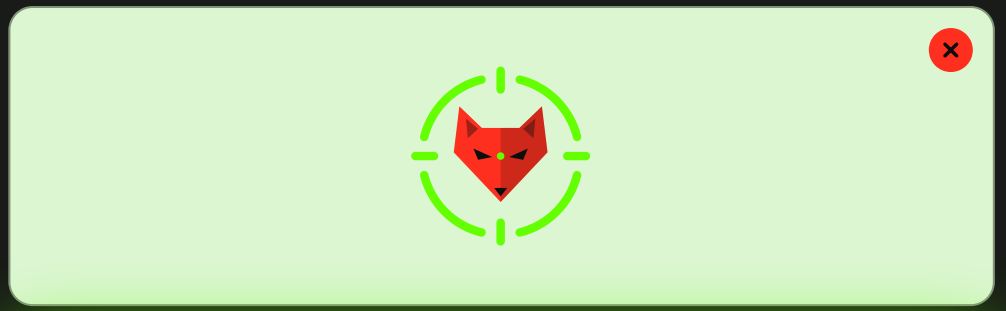

· Only ever on Void, Base or Surface. When a light background can't be avoided, use the app icon tile.

· One colour version: Signal on dark, or Void on Signal. Never red alone.

Do & don't

Use the icon tile or the mark on dark surfaces.

Don't put the full-colour mark on light backgrounds.

Don't stretch, skew or crop the mark.

Don't recolour it or add glows and effects.

02 · BRAND

Principles

The Prey runs on a phone but it's played in the street. The interface is a surveillance instrument for a manhunt: night-vision optics, GPS trackers and field-radio comms. Phosphor green burning against dead grey.

01

Glanceable over beautiful

Critical state (your role, the nearest threat, the time left) has to register in under a second. Hierarchy beats decoration.

02

Green is information

Signal green is the most precious pixel on screen. Keep it for live, actionable data. If everything glows, nothing does.

03

Two sides, one system

Prey and Hunter share one instrument. Role shows through a single accent (green or red), never through a different layout.

04

The world is the canvas

Map and radar come first. Chrome stays thin and translucent and recedes so the playfield dominates.

● 03 · BRAND

Voice & tone

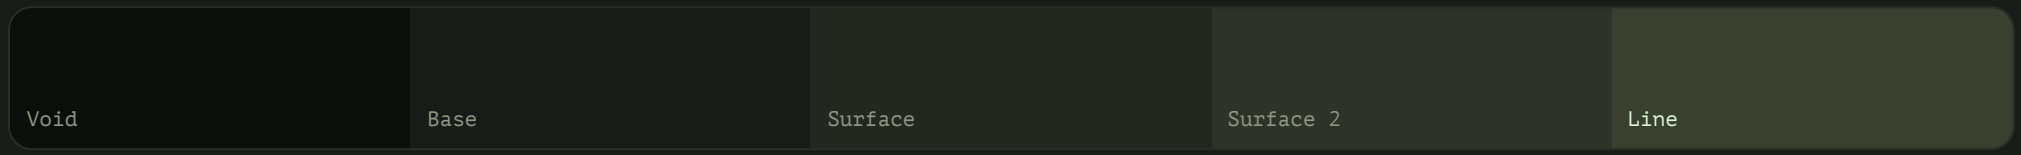

Short, imperative, radio-operator calm. Say what is happening, then what to do. No exclamation marks, emoji or apologies.

● DO	● DON'T
You are hidden. Keep moving.	Oops! We couldn't find you 😅
Hunter nearby. Break line of sight.	You might want to consider moving.
Signal lost. Find open sky.	Error 403: location unavailable.
Hunt begins in 00:10.	Welcome back, valued player!

Color

A desaturated, green-tinted grey base lets signal green and threat red read as light sources. The palette is unchanged from v1. What's new is the token naming and stricter rules for where each colour may appear.

Surfaces

Void

#0C0E0C

--tp-void · bg-inset

Map base, inputs, insets.

Base

#181B17

--tp-base · bg

App background.

Surface

#23271F

--tp-surface · bg-card

Cards, sheets, panels.

Surface 2

#2D3328

--tp-surface-2 · bg-raised

Line

#39402F

--tp-line · border

Borders, dividers.

Signal

Signal
#64FF00
--tp-signal · accent
Primary action, live data, Prey role.

Signal Dim
#3F9E00
--tp-signal-dim · accent-muted
Eyebrows, secondary borders.

Signal Deep
#1F4D00
--tp-signal-deep
Radar grid, inactive tracks. Decorative only.

Roles & status

Prey · Safe
#64FF00
accent
You are hidden. Friendly markers.

Hunter · Threat
#FF2F1F
--tp-hunter · danger
Hunters, tagged, destructive.

Caution
#FFB300
--tp-caution · warning
Low time, contested zones.

Info
#13E0C8
--tp-info · info
Waypoints, neutral system messages.

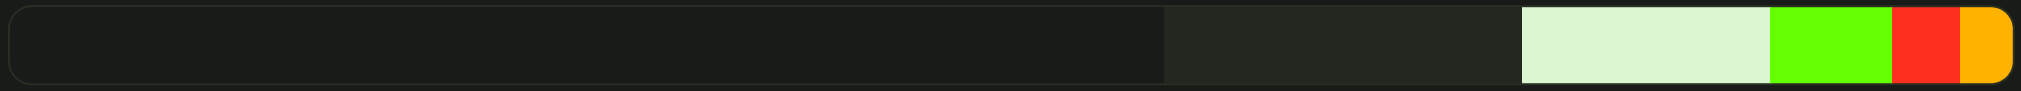

Text

Primary
#DCF6D2
--tp-text · fg
Headings, values, body on dark.

Soft
#8C9A83
--tp-text-soft · fg-muted
Descriptions, labels, captions.

Ghost
#5A6553
--tp-text-ghost · fg-disabled
Disabled and placeholder only.

Usage ratio

Roughly 60% base · 20% surface · 12% text · 5% signal · ≤3% threat and caution. If a screen reads as "green", there's too much accent.

● 05 · FOUNDATIONS

Typography

Two faces with two jobs. Special Elite is a battered typewriter face that stamps headings and big readouts like a printed dossier. PT Mono handles everything else, and its fixed width keeps live numbers from jittering.

DISPLAY · HEADINGS, READOUTS

Aa 04:17

ABCDEFGHIJKLMNOPQRSTUVWXYZ

BODY · TEXT, LABELS, DATA

Aa 147m

abcdefghijklmnopqrstuvwxyz

Type scale

DISPLAY	56 / 1.0 · SE	STAY HIDDEN
TITLE-1	32 / 1.1 · SE	Mission briefing
TITLE-2	24 / 1.2 · SE	Nearest threat
TITLE-3	19 / 1.3 · SE	Active players
READOUT	44 / 1.0 · SE	14:12
BODY	15 / 1.6 · PT	You are hidden. Keep moving.
BODY-SM	13 / 1.5 · PT	Last ping 3 seconds ago
LABEL	11 / 1.0 · PT · +1.5	DISTANCE TO EDGE

Special Elite has one weight. Create emphasis with size and colour, never faux-bold. Labels are uppercase PT Mono with +1.5px tracking, in Soft rather than Ghost. Keep body lines under ~68 characters.

● 06 · FOUNDATIONS

Space, shape, depth

A 4pt grid. Corners now scale with component size, so small controls stay crisp and instrument-like and large sheets feel modern. Depth comes from a step up in surface colour plus a soft shadow, not from heavier borders.

● 07 · FOUNDATIONS

Motion

Motion is telemetry. It loops only when something is live and is otherwise short and decisive. Every loop stops under `prefers-reduced-motion`, with the state shown through colour instead.

DURATIONS

`d-fast`	120ms · press
`d-base`	200ms · state
`d-slow`	320ms · sheets

EASING

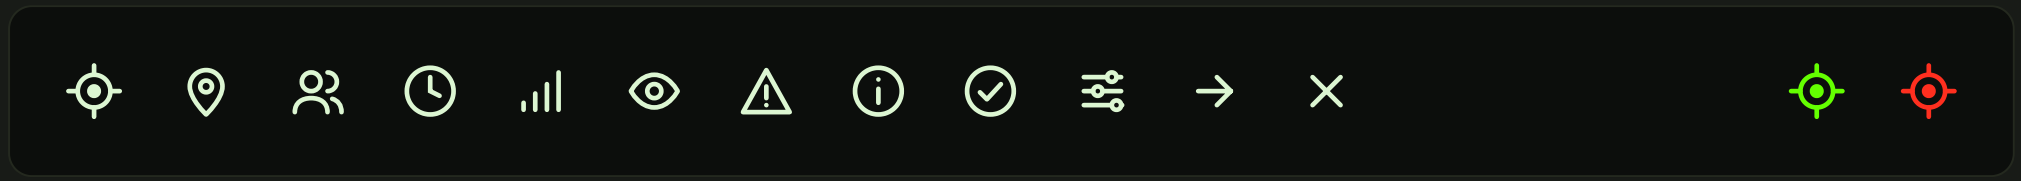

`ease-out`	.2 .8 .2 1 · enter
`ease-in-out`	.65 0 .35 1 · loops
`linear`	radar only

SIGNATURE LOOPS

Radar sweep	3.4s linear
Blip ping	2s ease-out
Live pulse	1.6s in-out
Threat flash	1s in-out

Iconography

A 24px grid with 2px strokes, round caps and no fills except for focal dots. Icons take the colour of their text. Pair them with a label wherever space allows.

Accessibility

People play this outdoors, in sunlight, while moving. Contrast and target size aren't optional. WCAG 2.2 ratios against Base (#181B17):

FOREGROUND	ON BASE	ON SURFACE	ALLOWED USE
Primary #DCF6D2	15.0	13.1	All text
Signal #64FF00	13.1	11.5	All text, icons
Info #13E0C8	10.4	9.1	All text
Caution #FFB300	9.7	8.5	All text
Soft #8C9A83	5.8	5.1	Body, labels, captions
Signal Dim #3F9E00	5.1	4.4	Eyebrows ≥ 11px on Base, borders
Hunter #FF2F1F	4.7	4.1	Text ≥ 14px, icons, fills
Ghost #5A6553	2.8	2.5	Disabled and placeholder only, never informational
Void on Signal fill	14.6		Primary button label
Void on Hunter fill	5.2		Danger button label. Primary text on red is 3.2, so don't use it.

Touch targets are at least 48 × 48. The TAG action is 72.

Never use colour alone. Role and threat state always carry a label or an icon too.

Pair critical alerts with haptics. Respect the system's reduced-motion and text-size settings.

Buttons

One primary action per screen. Labels are uppercase PT Mono and say what happens ("Start hunt", not "OK"). Default height is 48.

06:22	Final stage label appears
02:51	Last 5 min flash 1s loop

Radar & map

The radar is the signature element: Void disc, Signal Deep rings every 25% of radius, a linear 3.4s sweep. You are the light dot in the centre. The map uses a dark, desaturated style so markers are the brightest things on screen.

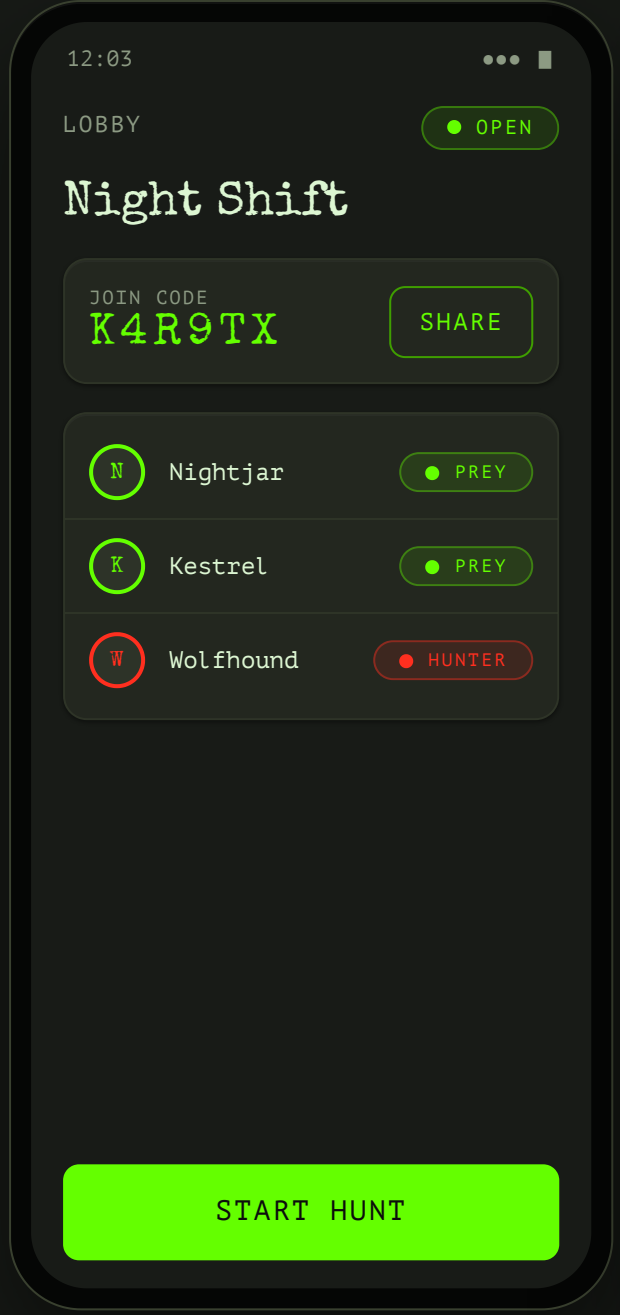

Markers are 20px with a 3px Void keyline so they hold up on any map tile. A position older than 2 updates fades to Ghost.

Screens

Reference compositions showing how the pieces combine. Map first, chrome translucent, one primary action.
